ELAU System 2. ELAU System 1. ELAU System 1. ELAU System 3. ELAU System 2. ELAU System 3. ELAU Operating Manual - Page 1. ELAU System Description. The ELAU System provides the user with a direct access to the business relevant data, and to other internal documents that are needed in daily operations. The ELAU System is used as a frontend for large ERP applications. The direct access to the current data allows to analyse the data immediately, and allows to make quick decisions. The ELAU System provides excellent benefits for data access, data analysis, and decision support. Other benefits include the provision of data redundancy, data consolidation, and the information safety. Page 2. User interface. The ELAU System is based on a tabular user interface (GUI). The GUI provides a consistent, rapid and intuitive user experience. The tabular user interface is based on the concept of flexible data architecture. The data sources can be addressed from different sources in the ELAU System. The ELAU System provides a uniform data structure and a consistent data access across the ELAU System components. The tabular user interface is easily modifiable. Data can be added, updated, or deleted in a rapid way. The user can enter the data directly into the table or search in the database. Using the ELAU System benefits include the rapid deployment of new applications. An example of the data sources can be found on page 11. The ELAU System includes two modes, namely: ELAU Simulation Mode and ELAU Production Mode. The ELAU System can switch from simulation to production mode, when the current mode is production. The switching is based on the availability of the needed data from the current data sources. Using the ELAU System benefits include the automatic switching between simulation and production mode. The ELAU System enables the selection of different business processes. The processes can be selected directly from the table, as well as from the menus. Another feature is the automated status message indicating the availability of the processes. In production mode, the processes are available and the operations proceed. In simulation mode, the processes are disabled. The ELAU System provides the user with a highly efficient interface for data analysis. The ELAU System provides direct access to the current data and to other relevant data sources. The ELAU System is based on a tabular user interface (GUI). The ELAU
